

Agri chain

Blockchain for Sustainable Agriculture

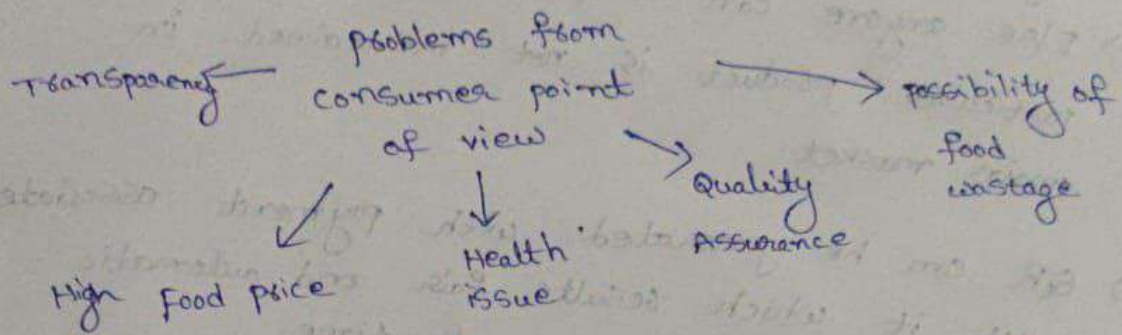

Supply chains

How
Agri chain is
solving key
problems

- 1) Farmers can go to any panchayat/can upload video of himself for fair utilization of application
- 2) Automatic decryption of data farmers video is done with high accuracy
- 3) Government can keep track of farmers and help with loss occurred
- 4) Farmers can keep track of prices

5) Fair pricing

How Aggichain is Solving above problems

- 1) Food wastage is Reduced by donation feature
- 2) Donation required such as asphanges... can register, can collect if there is any excess amount of food is left.
- 3) Food price will be controlled
- 4) with High transparency, quality can be maintained.

Process/Work Flow

- Farmer registers through web application of Aggichain
- farmer can keep upto date information about products
- Product Id can be generated after registration of products.
- By noting down the product Id, farmer can track his/her produced crops usage.
- Information will be updated by everyone involved in chain.

- If product registered should be consumed by completing overall chain
- Else anyone can complaint / raise issue if particular product is not maintained in main market
- QR can be generated with payment associated with it which results fair and automatic updation at any point of time.

Why Blockchain is required?

- To enhance transparency
- To reduce manipulation of data in supply chain.
- For fair transaction
- No centralized party to manipulate
- Cost Reduction

Path
